- Up to 7 SH2WBU230N can be connected on the same network
- Connection to Sx2WEB24 via internal bus or terminals via the high speed bus.
- Dimension: 2-DIN module

## Product Description

The wireless base unit SH2WBU230N generates the wireless network performing the functions of a wireless access point and router.

The generated protocol is called WiDup and it is based on the standard IEEE 802.15.4 at 2.4 GHz.

It is part of the smart-house system and it has to be used together with the controller Sx2WEB24.

Each Sx2WEB24 can be connected to up to 7 sub-

master generators (the sum of SH2MCG24, SH2DUG24 and SH2WBU230N is 7) in order to have up to 7 wired/wireless networks.

All the devices are connected via an internal bus if they are in the same cabinet, or via terminals if they are mounted on different cabinets.

Each SH2WBU230N must have an address that has to be programmed using the Sx tool.

## Transmission Range

The main factors that influence the transmission range of the SH2WBU230N are the antenna location of the receivers and transmitters, the building structure and the number of obstacles in the connection path. Other factors are noise sources (wi-fi routers, micro oven, blue tooth devices,...) that affect the receiver and dead spots caused by signal reflection from nearby con-

ductive objects. Since the anticipated transmission range depends on these system conditions, range tests should be performed before a specific range is determined for an application. The following transmission ranges are to be viewed as general guidelines:

Device Position	Operating Distance
In the open air	Approx. 700m
Plaster-board/wood	Approx. 30 m Max. 5 walls
Tile and cellular concrete	Approx. 20 m Max. 3 walls
Reinforced concrete walls/ceilings	Approx. 10 m Max. 1 ceiling/wall

Transmission range is limited by:  
- insulation material with

metal foil  
- intermediate ceilings with metal or carbon fibre panels  
- lead glass or metal-coated glass  
- mounting wall transmitters on metal walls.
